pip install uv → installed virtual environment

uv venv → created & added in our folder.

.venv/Scripts/activate → activate venv

पहले आ गया जहां अब virtual env के अंदर है।

now, to install anything uv pip install flask

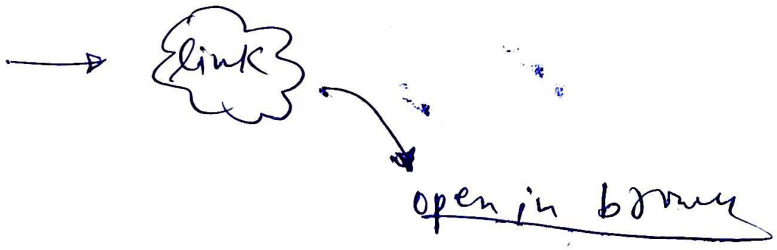

uv pip install Django

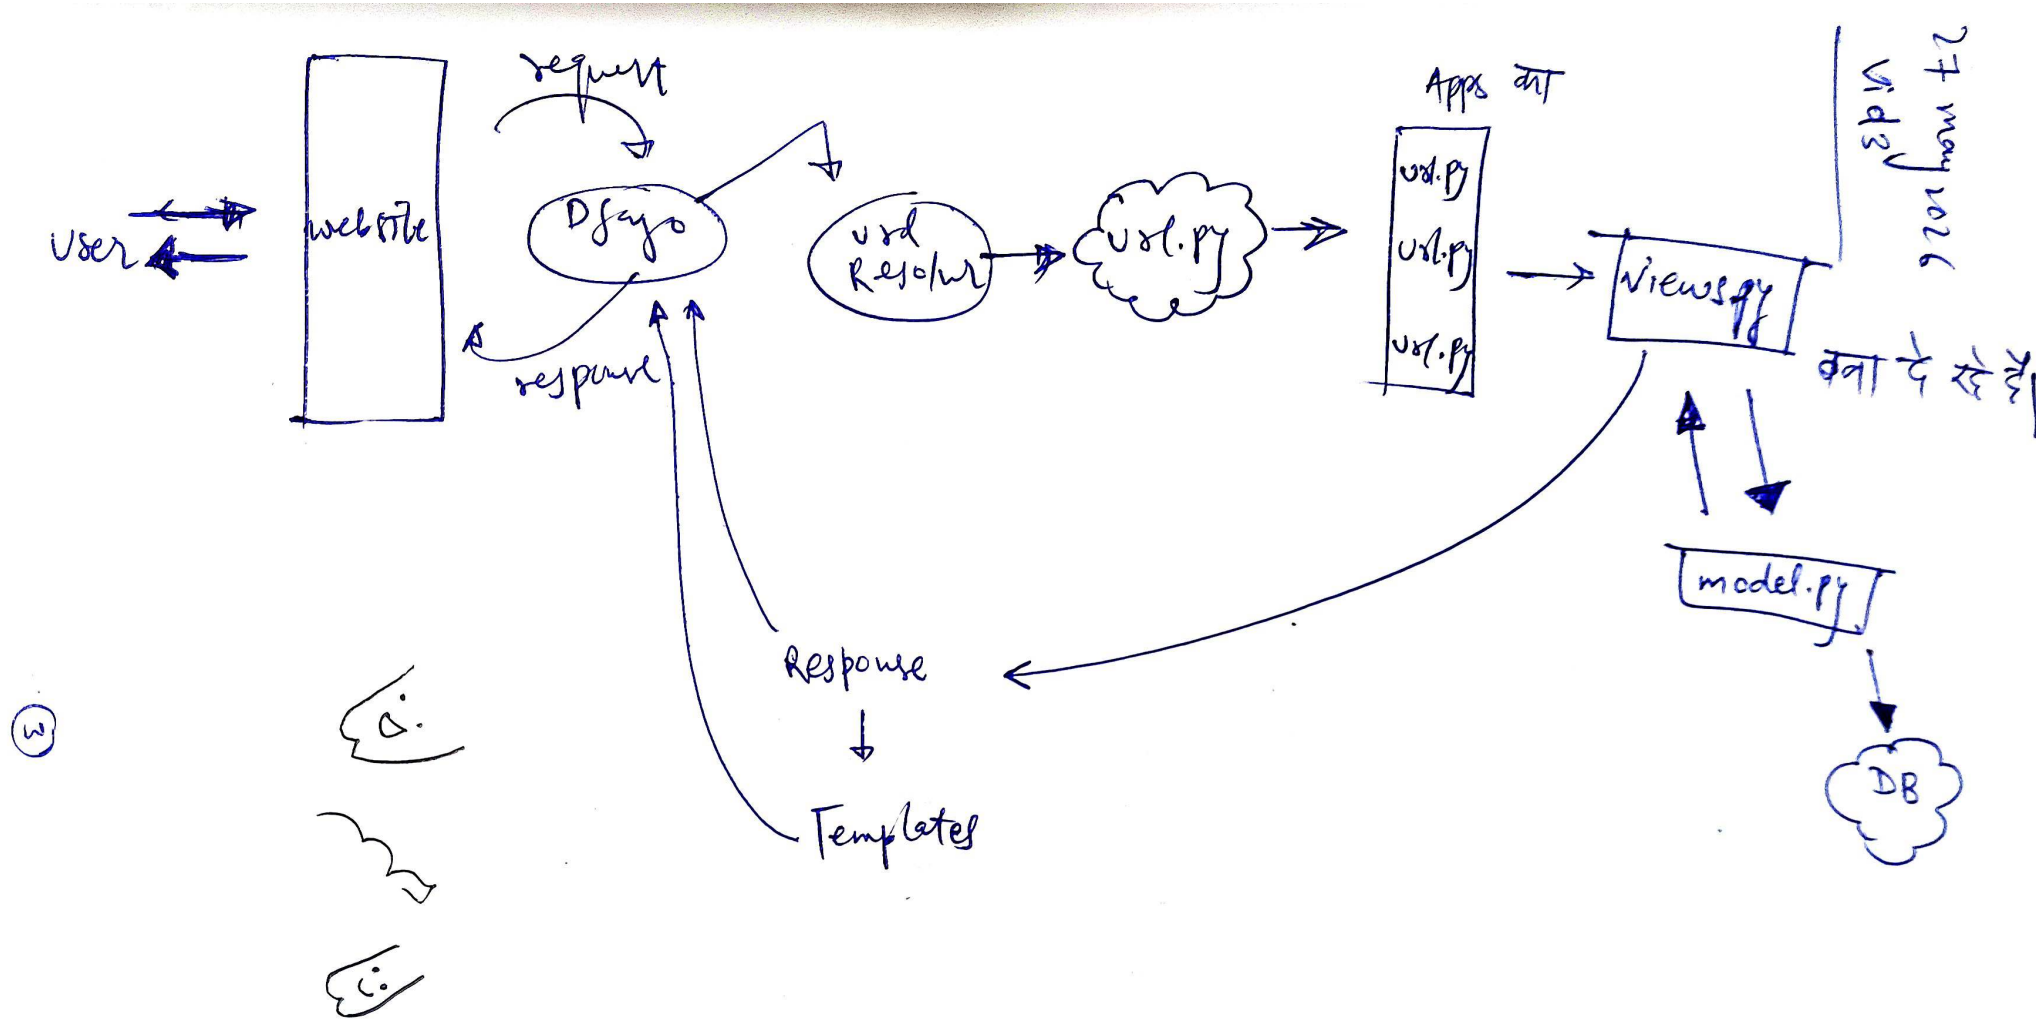

django-admin startproject chaiaurDjango

cd chaiaurDjango

(dir)

python manage.py runserver

View.py

```
from django.http import HttpResponse

def home(request):
    return HttpResponse("Hello DJango")

def about(request):
    return HttpResponse("Hello Jokes")

def contact(request):
    return HttpResponse("Contact page")
```

urls.py

```
from . import views

urlpatterns = [
    path('admin/', admin.site.urls),
    path('', views.home, name='home'),
    path('about/', views.about, name='about'),
    path('contact/', views.contact, name='contact'),
]
```

Terminal में manage.py file में

python manage.py runserver → link

open in browser

Home

about

contact

link/about/

link/contact/

- venv
- chai aur Django
  - chaiwin Django
    - static
    - Templates
      - index.html

views.py

```
from django.shortcuts import render

def home(request):
    return render(request, 'index.html')
```

↓

python manage.py से link को runserver

load नहीं होगा

settings.py

'DIRS': ['templates'],

अब होगा

adding CSS to our HTML code

{% load static %}

index.html

```
<link rel .....
    href = "{% static 'style.css' %}"
```

settings.py

import os → line 12

STATICFILES_DIRS = [os.path.join(BASE_DIR, 'static')] → line 118

adding tailwind.

Terminal firstly go in virtual environment.

① .venv/scripts/activate

② uv pip install django-tailwind

③ uv pip install 'django-tailwind[reload]'

Audited 1 package

audit नहीं install करता है.

④ python -m ensurepip --upgrade

python -m pip install --upgrade

मेरे मे yaha पर ही sahi से हो गया!

(main)

settings.py

Installed APP [.

'tailwind'

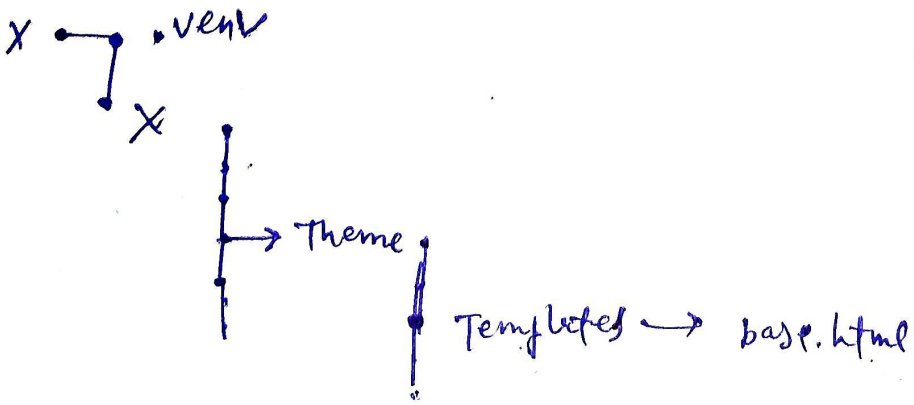

uv pip install cookiecutter

python manage.py tailwind init

' theme '

TAILWIND_APP_NAME = 'theme'

python manage.py tailwind install

{% load static
tailwind_tags %}

{% tailwind_css %}

अपने layouts.html में जा के Halka से

```
{% load static tailwind_tags %}

<head>

    {% tailwind_css %}
</head>
```

tailwind load करवाने के वास्ते

* index.html में पहले tailwind लगा के

```
<h1 class = "bg-orange-500 text-3xl" > ... </h1>
```

* make a new extra terminal named (tailwind green)

python manage.py tailwind start

* settings.py (main)

TAILWIND_APP_NAME

INTERNAL_IPS

{ NPM_BIN_PATH = '_____'

lekin ~~अगर~~ ~~हर~~ browser reload manually करना होगा to see any new changes in tailwind.

APPS

'django_browser_reload'

main

~~settings.py~~

MIDDLEWARE

[

* "django_browser_reload.middleware.BrowserReloadMiddleware",

]

main

urls.py

url patterns

[

path("__reload__/", include("django_browser_reload.urls")),

]

Admin Panel

migration (DB) से related है

मैं कभी (DB) से direct बात नहीं करता हूँ,

mere behalf पे Django का ORM करता है।

by default SQLite DB है।

python manage.py migrate.

↘ अब तो इसमें कोई 18 error नहीं आएगा।

link/admin/ → Admin Panel open होगा।

python manage.py createsuperuser

Username → Divyam

email → not compulsory है

Password → IND123 : windows

again password

vid 6

30 may 2026

Handle model and urls

```
python manage.py changepassword divyansh
Password :
                                    likho yaha.
```

Chai models.py

```
from django.utils import timezone

class ChaiVarity(models.Model):
    name = models.CharField(max_length=100)
    image = models.ImageField(upload_to='chais/')
    date_added = models.DateTimeField(default=
                                      timezone.now)
    type = models.CharField(max_length=2, choices=
                            CHAI_TYPE_CHOICE)

CHAI_TYPE_CHOICE = [
    ('M2', 'MASALA'),
    ('GR', 'GINGER'),
    ('KL', 'KIWI'),
    ('PL', 'PAAN'),
    ('EL', 'ELAICHI'),
]
```

(15)

(M2)

(A1)

(CLV) — python -m pip install Pillow

chai

settings.py

STATIC

```
MEDIA_URL = '/media/'
MEDIA_ROOT = os.path.join(BASE_DIR, 'media')
```

main

urls.py

```
from django.conf import settings
from django.conf.urls.static import static

urlspatterns = [

]

+ static(settings.MEDIA_URL,
    document_root = settings.MEDIA_ROOT)
```

अब हमे बताना होगा Django को manually की हमने DB मे कुछ changes कीया है उसको देख लो।

python manage.py : makemigrations (chai)

वो folder बना के दो तो और अच्छा है।

(Chai)
admin.py

```
from .models import chaiVarity

# Register
admin.site.register(chaiVarity)
```

python manage.py runserver

⟹ link/admin/

chai
(add)

GINGER STUFFS

Par chaiVarity_object(1) बन जाएगा

chai

models.py

def __str__(self):
    return self.name

ChaiVarity.object(1) ⟶ Half Cup Ginger Tea

---

chai

views.py

from .models import ChaiVarity

def ...
    chais = ChaiVarity.objects.all()

    return (... , {'chais': chais})

all_chai.html

```
{% block content %}
<h1> welcome ... </h1>
<div class = "grid grid-cols-3 gap-4 m-4" >
{% for chai in chais %}
<div class = "chai-item" >
<img src = "{{ chai.image.url }}" alt = "Chai images" >
<h3> {{ chai.name }} </h3>
</div>
{% endfor %}
</div>
{% endblock %}
```
